# Orlansoft Growth

# Expertise

**SYSTEMIZE. INTEGRATE. OPTIMIZE.**

## Systemize

Systemizing business processes into Orlansoft ERP means spending less time and work to obtain critical information for your business using less resources. Get faster transition period when persons in charge of processes are replaced. Help organization to easily replicate the system to other sites for business coverage expansion. The system acts a template that is capable of being replicated to branch offices and subsidiaries, making new sites get productive and more manageable in less time.

## Integrate

Orlansoft helps customer to integrate users, processes and data in centralized database to **minimize redundant data entry**, reduce paper-based communication, **unify business operations** on single platform by providing a single view of master data (such as customers, suppliers, products) and provide on-demand access to critical **real-time information from single source of truth.**

## Optimize

Orlansoft help company to optimize business process and resources with following benefits:

1. **Streamline operation** by reducing: a) Transaction cost and processing time of order entry, order fulfillment, invoicing, procurement, and other processes. b) Cost calculation processing time. c) Monthly Closing Time.
2. Provide **tools to enhance control**. The system provides features like electronic approval and security settings that prevents users from overstepping their authorizations, at the same time giving authorized users discretionary measures to deal with exceptional cases which ultimately will be reported in the exception logs.
3. Real-time and **easy to access decision support information** help organizations improve sales and services. All critical information that is needed to run the enterprise is available at right place and at the right time, providing business decision makers with the tools to exercise considerable advantage over the competition.
